Overview:

This instructor-led training course will cover, install, discovery, configuration, monitoring and troubleshooting Brocade FC SANs using Network Advisor. This course includes hands on labs to reinforce knowledge learned during the presentations.

Objectives

- Install Network Advisor
- Configure the Network Advisor server
- Discover SAN and host devices using Network Advisor
- Create user accounts
- Perform configuration tasks, such as zoning, Virtual Fabrics, upgrade firmware, backup and compare configuration files.
- Use Network Advisor to run reports and view logs
- Configure monitoring features such as COMPASS and Fabric Tracking, Auto Port disable, SNMP and syslog
- Configure MAPS and flow visions to monitor the fabric
- Create a custom Dashboard and share that dashboard with other users
- Use tools such as D_Port test and FC Trace route
- Capture a SupportSave for both Network Advisor as well as from switches in the monitored SAN
